BROWSER BASED GAMING WEBSITE

ABSTRACT

The project is entitled "Browser Based Games" which is an Online Gaming website with a rich collection of arcades and classical game libraries. As we all know that games are used to provide much relaxing experience, and user satisfaction, and more importantly the potential of this site is more than just gaming it will help to ease up the mind.

Online gaming refers to video games played over the Internet, where multiple players in different locations across the world can interact with each other. For convenience and simplicity, we provide high-security simple authentication, and anti-cheating validation. By providing the necessary credentials the user can login to the user account and keep track of and save the user data.

The range of games that can be created is on par with desktop and native OS counterparts. With modern Web technologies and a recent browser, it's entirely possible to make stunning, top-notch games for the Web so that every client can use it.
